### DETAILED ACTION

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear if this is a method or apparatus claim, and in either case there is no means plus function or method steps to implement the claimed invention.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3, 6, 7, 8, 9, 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gunther (2005/0013523). For claim 1, the applicant has described the prior art spatial light modulator system with respect to figures 1A, 1B, and 2, and sections 0022-0023, but there is no mention of the use of non-linear pattern to the electrodes, however, Gunther describes in the abstract, electrodes that minimize the effects of PDL and PMD, and in fig. 3 and section 0027 disclose electrodes whose shape are non-linear, and one would want to use them in the prior art because of their ability to minimize the effects of PDL and PMD. The size range of the particles is known in the art, and the use and orientation of quarter wave plates is known in the field and discussed in the above mentioned sections.

Art Unit: 2873

5. Claims 2, 4, 5, 10-14, 16-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: In the claimed invention the types of non-linear patterns are not shown or suggested by the prior art. And the types of optical configuration in conjunction with the non-linear pattern for the electrodes are not shown or suggested by the prior art.
